What is robocasa?

https://robocasa.ai/docs/build/html/introduction/overview.html

Tasks in Robocasa?

https://robocasa.ai/docs/build/html/tasks/composite_tasks.html

Atomic task: close door, open door, close lid, open lid, insertion, pick&place, press button, slide rack, turn lever, turn knob.

Composite tasks: The tasks that composed with atomic task.

Objective

https://robocasa.ai/docs/build/html/introduction/overview.html

- Using the robot PandaOmron to accomplish an “atomic task” in robocasa.(exclude the task navigation)
- Suggested Methods：
  - Reward shaping
  - Curriculum learning
  - Combine imitation learning and reinforcement learning
- Aide Code is on moodle

Installation

1. Set up conda environment:

```
conda create -c conda-forge -n robocasa python= 3.12
```

2. Activate conda environment:

```
conda activate robocasa
```

3. Clone and setup robosuite dependency:

In the code example, we use this version of robosuite:

git clone https://github.com/ARISE-Initiative/robosuite.git
cd robosuite
git checkout aaa8b9b214ce8e77e82926d677b4d61d55e577ab
pip install -e .

4. Clone and setup this repo:

We use this version of robocasa:

git clone https://github.com/robocasa/robocasa.git
cd robocasa
git checkout 0f59111531118148b3d9383ab2e3e28f66d324fd
pip install -e .

5. Install the package and download assets:

```
python -m robocasa.scripts.setup_macros
python -m robocasa.scripts.download_kitchen_assets
```

Submission

- Code:
  - a zip file
  - a readme inside to describe how to evaluate the model and reduplicate the results.
  - A trained model
- Report:
  - Which method is used? The details?
  - What difficulty did you meet? How to solve?
  - The training curve of the robot
  - Visualization of the task
